Response to Amendment

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 2/9/2009 has been entered.

2. Based on applicant's amendment, filed 2/9/2009, see page 1 through 4 of the remarks, with respect to cancellation of claims 5, 6 and 10-11, and amended claims 1, 7, 8 and 12, have been fully considered and are persuasive, upon further consideration the rejection, of 102(e) and 103(a) for claims 1-4, 7-9 and 12-20, are hereby withdrawn.

The claims 1-4, 7-9 and 12-20 now renumbered as 1-16 are allowed.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to a method and arrangement for detecting a watermark in a media signal, more particularly in a media signal being played back through a graphics card of a personal computer.

Based on applicant's amendment, with respect to claim 1 representative of claims 7 and 8 the closest prior art of record (Rhoads and England), Rhoads reference is directed to multimedia

signal processing, and in particular relates to encoding information into and decoding information from video objects, and England reference is directed to methods and systems for cryptographically protecting secure content. More particularly, the present invention relates to techniques for cryptographically securing content routed through a graphics pipeline, providing both confidentiality and tamper protection with respect to the content, but neither Rhoads nor England teach or suggest, among other things, "display screen to locate image areas in which the video signal changes from frame to frame, converting RGB pixel values in the video signal into luminance values (Y) in order to determine luminance values of Y as $R/4 + G/2 + B/8$, where R is a red component, G is a green component, and B is a blue component of the RGB pixel values: defining a bounding box around the image areas to provide an area of interest; and detecting a watermark in said area of interest".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Rhoads and England) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
